

ABSTRACT

A packaged animal poison includes a
binder/rodenticide/bait mix molded into a cellulosic
housing. The housing is covered with a removable cover.
5 The housing defines an internal cavity in which the
rodenticide is disposed, a lower wall extending laterally
beyond the cavity, and an outer lower surface with
adhesive at its underside. The package itself may also
contain rodent attractant material and/or a human
10 aversion agent.
